**B. Translate the following texts into Farsi ;**

1. The tilt of the earth's axis changes the angle of the sun above the horizon. It also changes the lengths of day and night throughout the year. These two factors are very important in determining the amount of solar radiation.

2. The motion of air and air masses is very important in understanding climates of the earth. In a large scale, the general motion of the atmosphere determines the nature of the weather and climate.

3. Snow closely influences the lives of many people living in cities or in villages. Snow can be both useful and harmful. For example, snow can be useful for agriculture but it can stop the bus system in a city.

4. Soil requires time to develop, but the soil in colder environment needs more time than the soil in hot and humid areas. However, the full development of soil takes thousands of years.

5. A major reason for the increased interest in the ocean and ocean floors is the existence of land resources under the oceans. The continental shelves contain mineral deposits like those of the continents, including large oil reserves.
