30. The little girl said that she wanted to havepair of shoes.
- a. other b. others c. another d. the others

سؤالات تشریحی

B – Translate the following parts into Farsi.

- The water of the oceans and the air of the atmosphere combine to deliver great amount of moisture to the land in a system called the hydrologic system. The hydrologic system would not exist if water could not change from the liquid form to the vapor form and again to the liquid form or to solid form such as ice.
- In recent years, scientists have become interested in the use of wind as an energy source. Such an interest has been the most recent approach in the long history of human understanding of wind. This history is perhaps best shown by the way in which people throughout the world have named many things to what are local winds.
- Another factor in soil development is climate factor, particularly water and temperature. However, we should not apply a certain climatic condition to all similar soils within an area.
- As we know, life would not exist on our planet, if water did not exist. One reason is that without water there would be no soil. The lifeless surface of the rocks in the moon holds no water, and therefore no life. In its cycle, soil depends on water.
