2. The work of clinical psychologists involves trying to differentiate the normal from abnormal and evaluating the patient's personality in an attempt to understand his or her symptoms and feelings.
3. Validity is concerned with whether an assessment technique actually measure what is intended to measure. Does an intelligence test truly measure intelligence?
4. Antonyms such as abnormal and mental health versus mental illness imply that people can be divided neatly into two distinct groups, those who are normal and those who are not.
5. Behavior therapies are based on the principles of learning, Instead of emphasizing insights, behavior therapists make direct efforts to alter problematic responses and maladaptive habits.
6. Nothing is so certain in life as the existence of uncertainty. From the day of birth, the human infant is required to process and somehow cope with an environment that is strang, uncertain and largely unpredictable.
